

Activation Guide for Windows

The great news is that the entire Simon Lead Extension and the Lead Form are built on standard web technologies (HTML, CSS, JavaScript) and the cross-platform Chrome Extension API. Because of this, it is **100% native and fully compatible** with Windows right out of the box. There is zero difference in how the code executes on Windows versus macOS.

Here is how to deploy this on any Windows PC.

Requirements

- A Windows PC (Windows 10 or 11).
 - **Google Chrome** (or Chromium browsers like Brave or Microsoft Edge).
-

Installation via Google Chrome (Recommended)

Step 1: Transfer the Extension Folder

1. Move the **simon-lead-extension** folder onto the target PC. You can do this via Google Drive, OneDrive, a USB drive, or a network share.
2. Place the folder in a permanent location where it will not be accidentally deleted (e.g., **Documents** or **Projects**).

Step 2: Install in Chrome (Windows)

1. Open **Google Chrome**.
2. In the address bar, type **chrome://extensions** and press **Enter**.
3. In the top-right corner of the Extensions page, toggle **Developer mode** to the **ON** position.
4. Click the **Load unpacked** button that appears in the top-left corner.
5. In the file picker, navigate to the **simon-lead-extension** folder, select it, and click **Select Folder**.

Step 3: Pin the Extension

1. Click the **Puzzle piece icon** (Extensions) next to the Chrome address bar.
 2. Find **Simon Lead Extension** in the dropdown list and click the **Pin icon** so it stays visible in your toolbar.
-

Installation via Microsoft Edge (Optional)

Step 1: Transfer the Extension Folder

1. Move the **simon-lead-extension** folder onto the target PC and place it in a permanent location.

Step 2: Install in Edge

1. Open **Microsoft Edge**.
2. In the address bar, type **edge://extensions** and press **Enter**.

3. Toggle **Developer mode** to the **ON** position (usually in the left sidebar).
4. Click **Load unpacked**.
5. Select the **simon-lead-extension** folder and click **Select Folder**.

Step 3: Pin the Extension

1. Click the **Extensions icon** next to the Edge address bar.
 2. Find **Simon Lead Extension** and click the **Pin icon**.
-

Step 4: Usage

1. Log into your Simon dashboard as usual.
 2. Navigate to a lead.
 3. Click the pinned extension icon.
 4. Click **Fill Form**.
 5. The extension will automatically open a new tab to <https://felixegan.me/lead-form> and pass the data gracefully.
 6. When done, click the **New Lead** button to automatically close the tab and return to the Simon dashboard.
-

Windows Troubleshooting & Notes

- **Copy/Paste:** Use **Ctrl + V** to paste after clicking "Copy to Clipboard" in the lead form.
- **Security Warnings:** Chrome or Edge may warn about Developer Mode extensions. This is expected for unpacked extensions.
- **Path Changes:** If the extension folder is moved or renamed, you must remove and re-load it from the extensions page.
